

COMPILER THEORY

Tiny Compiler || MS2

Document containing Two Sections:

- Section One : Terminals
- Section Two : CFG

Terminals

Symbols and Operators

- { } (function body delimiters)
- () (for grouping and function parameters)
- ; (statement terminator)
- , (separator)
- := (assignment operator)
- +, - (addition operators)
- *, / (multiplication operators)
- <, >, =, <> (relational operators)
- ss, || (Boolean operators)

Keywords

- int, float, string (datatypes)
- main (for main function)
- if, then, else, elseif, end (conditional statements)
- repeat, until (loop statements)
- read, write (I/O statements)
- return (function return)
- endl (end line)

Special Sequences

- " (string delimiter)

Tokens

- identifier (user-defined names)
- number (numeric literals)
- letter (for identifiers)
- digit (for numbers)
- symbol (for comments)

CFG

Program Structure:

Program \rightarrow Functions Main_Function

Functions \rightarrow Function_Statement Functions $| \epsilon$

Main_Function \rightarrow int main () Function_Body

Function Declarations:

Function_Statement \rightarrow Function_Declaration Function_Body

Function_Declaration \rightarrow Datatype FunctionName (Parameters)

Parameters \rightarrow Parameter, Parameters $|$ Parameter $| \epsilon$

Parameter \rightarrow Datatype identifier

FunctionName \rightarrow identifier

Function Body:

Function_Body \rightarrow {Statements Return_Statement }

Statements:

Statements \rightarrow Statement Statements $| \epsilon$

Statement \rightarrow Declaration_Statement

$|$ Assignment_Statement

$|$ Write_Statement

$|$ Read_Statement

$|$ If_Statement

$|$ Repeat_Statement

$|$ Function_Call ;

Characters \rightarrow Character Characters $| \epsilon$

Character \rightarrow letter $|$ digit $|$ symbol

Declaration Statements:

Declaration_Statement \rightarrow Datatype DeclarationList ;

DeclarationList \rightarrow DeclItem DeclarationList_Tail

DeclarationList_Tail \rightarrow , DeclarationList $| \epsilon$

DeclItem \rightarrow identifier DeclItem_Tail

DeclItem_Tail \rightarrow := Expression $| \epsilon$

Datatype \rightarrow int $|$ float $|$ string

Assignment Statements:

Assignment_Statement \rightarrow identifier := Expression ;

Input/Output Statements:

Write_Statement \rightarrow write Write_Tail

Write_Tail \rightarrow Expression ; $|$ endl ;

Read_Statement \rightarrow read identifier ;

Conditional Statements:

If_Statement \rightarrow if Condition_Statement then Statements Else_Statement end

Else_Statement \rightarrow elseif Condition_Statement then Statements Else_Statement $|$ else Statements $| \epsilon$

Loops:

Repeat_Statement \rightarrow repeat Statements until Condition_Statement

Function Calls

Function_Call \rightarrow identifier (ArgumentList)

ArgumentList \rightarrow ExpressionList | ϵ

ExpressionList \rightarrow Expression ExpressionList_Tail

ExpressionList_Tail \rightarrow , ExpressionList | ϵ

Expressions:

Expression \rightarrow String | Equation | Term

String \rightarrow " Characters "

Equation \rightarrow Term Equation_Tail

Equation_Tail \rightarrow AddOp Equation | ϵ

Term \rightarrow Factor Term_Tail

Term_Tail \rightarrow MultOp Term | ϵ

Factor \rightarrow number | identifier | Function_Call | (Equation)

Conditions:

Condition_Statement \rightarrow Condition BooleanClause

BooleanClause \rightarrow Boolean_Operator Condition_Statement | ϵ

Condition \rightarrow Expression RelOp Expression

Operators:

AddOp \rightarrow + | -

MultOp \rightarrow * | /

RelOp \rightarrow < | > | = | <>

Boolean_Operator \rightarrow && | ||

Return Statement:

Return_Statement \rightarrow return Expression ;
